Patch Lead Overview

This range of booted RJ45 Patch Lead is manufactured and tested to conform to the ISO11801 Cat5 1999 and EIA/TIA 568 Addendum 11 draft standards for enhanced performance. Each Cat5e lead consists of 4 colour coded pairs. The PVC outer sheath and the stranded cores results in a high flexible and resilient cable.

Booted RJ45 patch leads are essential to effective business operations. Together with patch panels and switches they play an integral role in network communications, providing connection for Ethernet, ISDN, and VoIP phones systems. Quality and reliable booted RJ45 cat5e patch leads are the glue which holds networks together.

The moulded boot offers strain relief to the cable helping prevent the cable being pulled free from the RJ45 plug, and its flush design means it can easily be used in high density installations.

Available in a wide choice of colours and lengths up to 30mt, Comms Express are the business to business specialists, delivering great savings on top manufactured booted RJ45 patch leads.
