NSv firewall series help security teams reduce these types of security risks and vulnerabilities, which can cause serious disruption to business-critical services and operations. It enables enterprises to control dynamic traffic passing through a firewall and provides visibility and insight into disparate policies. It help simplify management tasks, reduce configuration errors and speed up deployment time, all of which contribute to a better overall security posture.

## SonicOSX and Security Services

The SonicOSX architecture is at the core of NSv 240/470/870 firewalls. It is powered by the feature rich [SonicOSX 7.0](#) operating system with new modern looking UX/UI, advanced security, networking and management capabilities.

Built from the ground up, SonicOSX 7.0 features Unified Policy that offers integrated management of various security policies. Easily provision layer 3 to layer 7 controls in a single rule base on every firewall, providing a centralized location for configuring policies. The new web interface presents meaningful visualizations of threat information, and displays actionable alerts prompting you to configure contextual security policies with point-and-click simplicity.

NSv further integrates SD-WAN, TLS 1.3 support, real-time visualization, high-speed virtual private networking (VPN) and other robust security features. Unknown threats are sent to SonicWall's cloud-based Capture Advanced Threat Protection (ATP) multiengine sandbox for analysis. Enhancing Capture ATP is our patent-pending Real-Time Deep Memory Inspection (RTDMI™) technology. As one of Capture ATP's engine, RTDMI detects and blocks malware and zero-day threats by inspecting directly in memory.

By leveraging Capture ATP with RTDMI technology, in addition to security advanced services, NSv series firewalls stop malware, ransomware and other advanced threats at the gateway.

<sup>1</sup>PAYG is currently available only on AWS.

<sup>2</sup>Memory with Jumbo frame disabled.

<sup>3</sup>Memory with Jumbo frame enabled. Additional memory is required for Jumbo frames. Jumbo frames are not supported on Azure and AWS.

<sup>4</sup>High availability is available on VMware ESXi platform, KVM, Azure, Microsoft Hyper-V and Nutanix. NSv 270 supports HA by using D3v2 VM size. HA is not supported on AWS. HA on Azure requires server size that supports three or more interfaces.

<sup>5</sup>Published performance numbers are up to the specification and the actual performance may vary depending on underlying hardware, network conditions; firewall configuration and activated services. Performance and capacities may also vary based

on underlying virtualization infrastructure, and we recommend additional testing within your environment to ensure your performance and capacity requirements are met. Performance metrics were observed using Intel Xeon W Processor (W-2195 2.3GHz, 4.3GHz Turbo, 24.75M Cache) running SonicOSv 6.5.0.2 with VMware vSphere 6.5.

<sup>6</sup>Increased SSL VPN number will be available only from SonicOS 6.5.4.4-44v-21-723 firmware and onwards.

<sup>7</sup>VLAN interfaces are not supported on Azure and AWS. Testing Methodologies: Maximum performance based on RFC 2544 (for firewall). Threat Prevention/GatewayAV/ Anti-Spyware/IPS throughput measured using industry standard Keysight HTTP performance test tools. Testing done with multiple flows through multiple port pairs.

Threat Prevention throughput measured with Gateway AV, Anti-Spyware, IPS and Application Control enabled with default firewall settings. VPN throughput measured with UDP traffic using 1418 byte packet size AESGMAC16-256 Encryption adhering to RFC 2544. All specifications, features and availability are subject to change.

<sup>8</sup>All performance parameters are tested using Dell R740 with SR-IOV and Turbo boost.

<sup>9</sup>Supported on Private Cloud and not on Public Cloud Platforms.

<sup>10</sup>Nutanix AHV is supported on SonicWall NSv 270/470/870 running SonicOSX 7.0.0 firmware and onwards.
